

INTERNSHIP

Green Closet Creative in Sycamore,
IL. Summer of 2025.

EStreet Epoxy

One of the things I'm most proud of during my internship was collaborating on the building and designing of the EStreet Epoxy website.

Working with another intern, we used WordPress to design and build this website from scratch. For my portion, the layout on every page was designed by myself, as well as the written blog posts, contact forms, and website copy. Color, font, footer layout, and cover image on each page were a joint effort between myself and the other Intern.

Green Closet Creative

As another extra assignment, I decided to redesign the GCC business card. I made it on InDesign using decorative elements from their website and current business cards to revamp them here. I did not make the green bar design on the front or the logo. I did add the green circle under the logo.

Spears Design Build Group

This was an extra assignment I did to utilize my skills in Adobe Photoshop and InDesign. I was given creative freedom to design the envelopes however I saw fit, while using the logo previously created by GCC. These are the 3 designs I came up with.

Spears Design Build Group

As another extra project near the end of my internship, I designed 3 letterhead options for Spears Design Build Group. Using Adobe InDesign and the logo from the envelopes above, I had the same amount of creative freedom for these as well. The decorative line element from the GCC created website was not designed by myself.

Windows Distillery

This video was made for Windows Distillery and posted to their Instagram page, for a specialty drink in 2025. I did not shoot the footage, but I edited the video together; choosing music, cuts, and length using Adobe Audition and Premiere Pro.
